

ABHISHEK NAIK

Go backend engineer for hiring, assessment, and candidate workflow platforms

Backend engineer with 2+ years of production experience building Go services for recruitment SaaS, assessments, candidate lifecycle automation, dashboards, exports, and async processing. Strong ownership across API design, MongoDB/PostgreSQL data flows, RabbitMQ workers, eligibility engines, audit logging, and AI-assisted assessment workflows.

2+ yrs PRODUCTION BACKEND	2,600+ GIT COMMITS SINCE 2025	480+ 2026 BACKEND COMMITS	178 2026 MERGE ENTRIES
------------------------------	----------------------------------	------------------------------	---------------------------

EXPERIENCE

Backend Engineer

Nov 2023 - Present

Lineup Technology Private Limited - Mumbai

- Build Go/Gin APIs powering candidate onboarding, recruiter workflows, assessments, job marketplace flows, institute operations, dashboards, and reporting.
- Implemented RabbitMQ-backed async bulk candidate import/update workflows with durable tracking, recovery, retry protection, duplicate detection, chunk safeguards, and production worker fixes.
- Built CSV/XLSX bulk document uploads for candidate documents, profile pictures, offer letters, Google Workspace PDF export, validation, timeout handling, and failed-row logging.
- Improved candidate lifecycle reliability across profile completion, education checks, location/state sync, duplicate project prevention, resume parser hardening, onboarding, OTP rules, and status consistency.
- Developed eligibility and qualification logic for jobs, mock interviews, qualification expressions, row-level connectors, visibility rules, and candidate apply/audit flows.
- Added production audit logging for candidate, job, company, follow-up, job publish, and SetJobPublic flows with Postgres-backed logs, scoped actions, and cleaner audit filtering.
- Optimized recruiter dashboards and exports with placement-cycle filters, salary metrics, active learner metrics, role target filtering, candidate stage aggregation, and MongoDB projections.
- Delivered assessment and maker-checker improvements across AI-generated questions, export reuse, scoring rules, reattempt counts, hints, auto-submission, checker routing, and permission guards.

SELECTED WORK

Async Bulk Candidate Import Platform

Queue-driven import/update flows using RabbitMQ, MongoDB, Redis, CSV/XLSX parsing, document uploads, recovery jobs, duplicate logs, and production-safe retry behavior.

Recruiter Analytics, Reports, and Exports

Dashboards and export APIs for placement cycles, candidate stages, salary/CTC, application counts, assessment scores, location fields, job statuses, and custom agency filters.

Eligibility, Qualification, and Audit Systems

Centralized job visibility, row-level qualification connectors, mock interview eligibility, candidate apply audits, company activity logs, and job publish audit fields.

CORE SKILLS

LANGUAGES

- Go
- SQL
- JavaScript
- Python

BACKEND

Gin, REST APIs, controller/service design, auth, validation, middleware, cron jobs

DATA

MongoDB, PostgreSQL, Redis, aggregation pipelines, query optimization, cache fallbacks

ASYNC SYSTEMS

RabbitMQ, AMQP, background workers, retries, recovery, queue durability

CLOUD AND AI

AWS S3, Google Cloud Storage, Firebase, Vertex AI, Gemini

REPORTING

CSV/XLSX imports, Excel exports, PDF workflows, wkhtmltopdf, report generation

DOMAIN STRENGTHS

- Recruitment SaaS and job marketplace workflows
- Candidate lifecycle and onboarding automation
- Assessment, scoring, and AI-generated questions
- Bulk operations, exports, and partner reporting

EDUCATION

B.E. Electronics and Telecommunication Engineering

Watumull Institute of Electronics and Computer Engineering

Mumbai | 2019 - 2023

CGPA: 8.94

TOOLS

Git, Docker, GitHub Actions, Linux, WebSockets, Pusher, Judge0, Excelize, wkhtmltopdf
